

CONVENTION CENTERS

Lighting can really affect the impression you leave on convention attendees. Flex Lighting Solutions can help provide just the right amount of light for any event, while helping you significantly reduce your operating expenses.

Here's how:

- **Improved Quality of Light** – Poor lighting has plagued convention centers for years. LEDs provide a significant improvement in the quality of light, providing a better environment that helps win business.
- **Increased Lighting Control** – Flex LED high bays can be dimmed to the desired light level or turned off when a room is not in use.
- **Lower Maintenance Costs** – The superior thermal management of Flex LED high bays leads to extremely long life, eliminating all of those expensive lamp and ballast replacements.
- **Reduce Energy Bills** – Savings up to 70% versus existing fixtures, with even more savings when combined with lighting controls.

A properly lit convention space can help you increase your revenue, while reducing your operating costs at the same time. Let Flex Lighting Solutions show you how.

Payback Scenario

Existing Lighting
Fixture Type: 400W Metal Halide
Quantity: 100
Wattage: 458W
Annual Operating Hours: 5000
Electrical Rate: \$0.10/kwh
Energy Use: \$22,900/year

Proposed Flex Lighting
Fixture Type: Essentials Series Performance 6MS
Quantity: 100
Wattage: 130W
Annual Operating Hours: 5000
Electrical Rate: \$0.10/kwh
Energy Use: \$6,500/year – 72% reduction
Energy Use with Occupancy Sensors: \$3,900/year – an 83% reduction, if “off” 40% of the time

Superior Lighting. Lowest Total Cost of Ownership. Flex Lighting Solutions.
